

Task Management App Final Write Up

Name: Leng Wei Cong, Justin
Matriculation Number: A0241293J

What I feel about my accomplishment:

Prior to this assignment, I had some knowledge in frontend with NextJS and had little to no knowledge on backend. This assignment has guided me into learning backend and frontend properly.

Framework

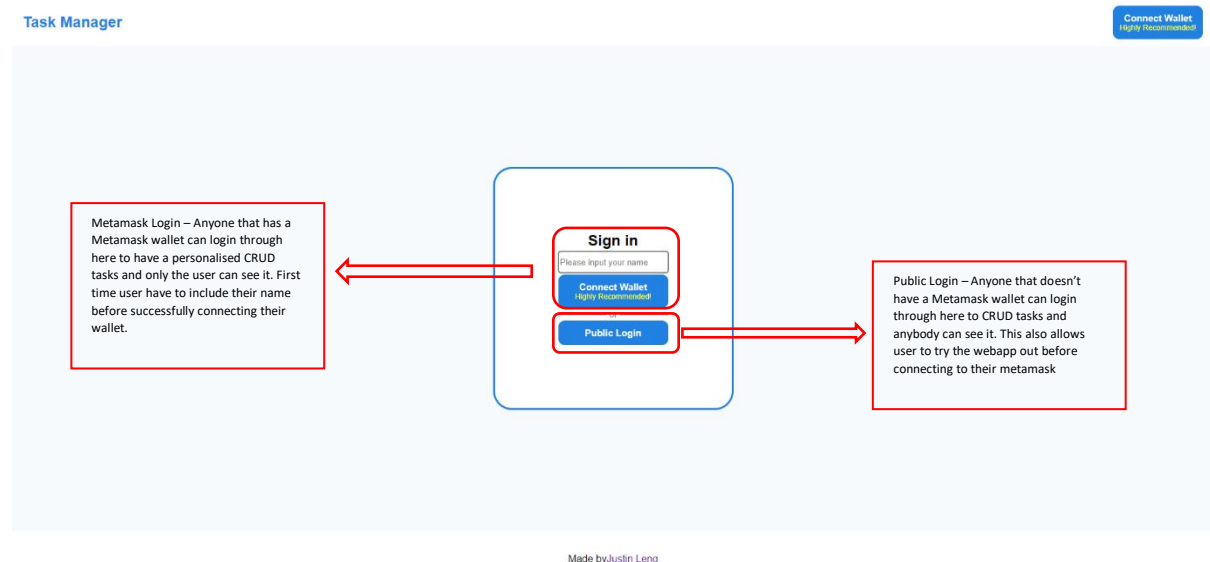

With Ruby on Rails used as a framework, it has made backend slightly easier as the interaction between the backend and database is mostly handled by Ruby on Rails framework. As I am also learning about web 3.0 programming on the side, I implemented the interaction of Metamask and the webpage for users to login so that they can personalise their task.

Deployment

The deployment of the website was quite challenging as I initially used AWS as a deployment method and the free version doesn't have enough space for the file deployment.

Overall, I had fun and was able to learn a lot from this assignment.
